A46742
metabotropic glutamate receptor, mGluR6 - rat
C;Species: Rattus norvegicus (Norway rat)
C;Dete: 21-Sep-1993 #sequence_revision 18-Nov-1994 #text_change 20-Jun-2000
C;Accession: A46742
R;Nakajima, Y; Tuakabb, H.; Akazawa, C.; Nawa, H.; Shigemoto, R.; Mizuno, N.; Nakani
J. Biol. Chem. 268, 11868-11873, 1993
A;Title: Molecular characterization of a novel retinal metabotropic glutamate recepto
A;Reference number: A46742; MUID:93280152
A;Reference number: A46742; MUID:93280152
A;Residus: preliminary
A;Molecule type: nucleic acid
A;Residues: 1-871 <ARAX.

FUNCTION: RECEPTOR FOR GLUTAMATE. THE ACTIVITY OF THIS RECEPTOR
IS MEDIATED BY A G-PROTEIN THAT INHIBITS ADENYLATE CYCLASE
                                                                                           SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
TISSUE SPECIFICITY: PROMINENT EXPRESSION IN OLFACTORY BULB,
PONTINE GRAY, LATERAL RETICULAR NUCLEUS OF THE TRALAMUS, AND
PIRIFORM CORTEX, LESS ABUNDANT EXPRESSION INCEREBRAL CORTEX,
HIPPOCAMPUS, CEREBELLUM, AND MAMMILLARY BODY.

```
Neuron 8:169-179(1992).
-!- FUNCTION: RECEPTOR FOR GLUTAMATE. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY A G-PROTEIN THAT INHIBITS ADENYLATE CYCLASE ACTIVITY.
MAY MEDIATE SUPPRESSION OF BURDOTRANSMISSION OR MAY BE INVOLVED IN SYNAPTOGENESIS OR SYNAPTIC STABILIZATION.
-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

Neurosci. 7:622-629(1995).
FUNCTION: RECEPTOR FOR GLUTAMATE. THE ACTIVITY OF THIS RECEPTOR IS WEDIATED BY A G-PROTEIN THAT INHIBITS ADBRYLATE CYCLASE ACTIVITY.
MAY MEDIATE BY A G-PROTEIN THAT INHIBITS ADBRYLATE CYCLASE ACTIVITY.
SYNAPTOGENERS: OF SYNAPTIC STABLILIZATION.
TISSUE SYNAPTIC STABLILIZATION.
TISSUE SPECIFICITY: WIDELY EXPRESSED IN DIFFERENT REGIONS OF THE ADULT BRAIN AS WELL AS IN FETAL BRAIN.
SIMILARITY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPLED RECEPTORS.
STRONGEST, TO MGLUR3.

                                      -!- DOMAIN: ALPHA-HELICAL PARTS OF THE C-TERMINAL INTRACELLULAR REGION MEDIATE HETERODIRERIC INTERACTION WITH GABA-B RECEPTOR 2. THE LINKER REGION BETWEEN THE TRANSMEMBRANE DOMAIN 3 (TM 3) AND THE TRANSMEMBRANE DOMAIN 4 (TM 4) PROBABLY PLAY A ROLE IN THE SPECIFICITY FOR G-PROTEIN COUPLING.
-!- SIMILARITY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPLED RECEPTORS.
GABA-B RECEPTOR SUBFAMILY.
-!- SIMILARITY: CONTAINS 2 SUSHI (SCR) DOMAINS.
-!- CAUTION: ISOFORM IE HAS BEEN CALLED 1C IN REF. 3.

MOREOVER
COEXPRESSION OF GABA-B-R1 AND GABA-B-R2 APPEARS TO BE A
PREREQUESTIE FOR MATURATION AND TRANSPORT OF GABA-B-R1 TO THE
PLASMA MEMBRANE (BY SIMILARITY).
-!- ALTERNATIVE PRODUCTS: 4 ISOFORMS; 1A (SHOWN HERE), 1B, 1C AND 10;
ARE PRODUCED BY ALTERNATIVE SPLICING.
-!- OOMAIN: ALPHA-HELICAL PARTS OF THE C-TERMINAL INTRACELLULAR REGION
MEDIATE HETEROCHMERIC INTERACTION WITH GABA-B RECEPTOR 2. THE
LINKER REGION BETWEEN THE TRANSMEMBRANE OOMAIN 3 (TM 3) AND THE
SPECIFICITY FOR G-PROTEIN COUPLING.
-!- SIMILARITY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPLEO RECEPTORS.

 GABA(B)
```

```
This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation -
 -I- COPACTOR: REQUIRES CALCIUM FOR HIGH AFFINITY BINDING TO GABA.
-I- SUBUNIT: HETERODIMER OF GABA-B-R1 AND GABA-B-R2. NEITHER OF WHICH
IS EFFECTIVE ON ITS OWN AND HOMODIMERIC ASSEMBLY DOES NOT SEEM TO
HAPPEN. ISOSOFMA IE (WITHOUT C-TEMENINAL INTRACELLULAR DOMAIN) IS
UNABLE TO DIMERIZE VIA A COILED-COIL INTERACTION WITH GABA-B-R2.
-I- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. MOREOVER
COEXPRESSION OF GABA-B-R1 AND GABA-B-R2 APPEARS TO BE A
PREREQUISITE FOR MATURATION AND TRANSPORT OF GABA-B-R1 TO THE
PLASMA MEMBRANE. ISOFORM IE CAN ALSO BE SECRETED.
-I- ALTERNATIVE PRODUCES: 5 ISOFORMS; 1A (SHOWN HERE), 1B, 1C, 1D AND
1E/TRUNCATED: ARE PRODUCED BY ALTERNATIVE SPLICING. ISOFORMS
CORRESPONDING TO THE FULL RECEPTOR ARE ESSENTIALLY FOUND IN THE
CENTRAL NERVOUS SYSTEM (CNS). ISOFORM IE IS THE MAJOR ISOFORM IN
ALMOST ALL PERIPHERAL TISSUES. IT MAY ACT AS AN ANTAGONIST OF
BETWEEN ISOFORM IA AND GABA-B-R2.
 1B. ISOFORM IE IS PREDOMINANTLY EXPRESSED IN PERIPHERAL TISSUES AS KIDNEY, LUNG, TRACHEA, COLON, SMALL INTESTINE, STOMACH, BONE MARROW, THYMUS AND MAMMARY GLAND.
 DOMAIN: ALPHA-HELICAL PARTS OF THE C-TERMINAL INTRACELLULAR REGION MEDIATE HETERODIMERIC INTERACTION WITH GABA-B RECEPTOR 2. THE
 SCIENCE 283:74-77(1999).

-1- FUNCTION: RECEPTOR FOR GABA. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G-PROTEINS THAT INHIBITS ADENYLYL CYCLASE ACTIVITY, STRUCLARES POYASSIUM CHANNELS.

STRUCLARES PHOSPHOLIPASE A2, ACTIVATES POYASSIUM CHANNELS.

INACTIVATES VOLTAGE-DEPRINENT CALCIUM-CHANNELS AND MODULATES

INOSITOL PHOSPHOLIPIDS HYDROLYSIS. PLAYS A CRITICAL ROLE IN THE FINE-TUNING OF INHIBITORY SYNAPPIC TRANSMISSION. PRE-SYNAPPIC GABA-B-R INHIBIT NEUROTRANSMITTER RELEASE BY DOWN-REGULATING HIGH-VOLTAGE ACTIVATED CALCIUM CHANNELS, WHEREAS POSTSYNAPTIC GABA-B-R DECREASE NEURONAL EXCITABILITY BY ACTIVATING A PROMINENT INWARDLY RECILEXING POTASSIUM (KIR) CONDUCTANCE THAT UNDERLIES THE
 TISSUE SPECIFICITY: HIGHLY EXPRESSED IN BRAIN AND WEAKLY IN HEART, SMALL INTESTINE AND UTERUS. MOSTLY EXPRESSED IN GRANULAR CELL AND MOLECULAR LAYER FOR ISOFORM IA AND IN PURKINJE CELLS FORM ISOFORM
 FUNCTION: ISOFORM 1E FUNCTION MAY BE TO REGULATE THE AVAILABILITY OF FUNCTIONAL GABA-B-R1A/GABA-B-R2 HETERODIMERS BY COMPETING FOR GABA-B-R2 DIMERIZATION. THIS COULD EXPLAIN THE OBSERVATION THAT CERTAIN SMALL MOLECULE LIGANDS EXHIBIT DIFFERENTIAL AFFINITY FOR CENTRAL VERSUS PERIPHERAL SITES.
 LATE INHIBITORY POSTSYNAPTIC POTENTIALS. NOT ONLY IMPLICATED IN SYNAPTIC INHIBITION BUT ALSO IN HIPPOCAMPAL LONG-TERM POTENTIATION, SLOW WAVE SLEEP, MUSCLE RELAXATION AND ANTINOCICEPTION. ACTIVATED BY (-)-BACLOFEN, CGP27492 AND BLOCKED BY PHACLOFEN.
 (TM 3) AND THE
 SPECIFICITY FOR G-PROFEIN COUPLING. SIMILARITY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPLED RECEPTORS.
 MEDLINE-20237752; PubMed=10773016; Sullivan R., Chateauneuf A., Coulombe N., Kolakowski L.F. GABA B-R DECREASE NEURONAL EXCITABILITY BY ACTIVATING A PROMINENT
INMARDLY RECTIFYING POTASSIUM (KIR) CONDUCTANCE THAT UNDERLIES THE
LATE INHIBITORY POSTSYNAPTIC POTENTIALS. NOT ONLY IMPLICATED IN
SYNAPPIC INHIBITION BUT ALSO IN HIPPOCAMPAL LONG-TERM
POTENTIATION, SLOW WAVE SLEEP, MUSCLE RELAXATION AND
ANTINOCICEPTION.

1. SUBUNT: HETERODIMER OF GABA-B-R1 AND GABA-B-R2. NEITHER OF WHICH.
MEDIATED BY G-PROTEINS THAT INHIBITS ADENYLYL CYCLASE ACTIVITY,
```

- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. MOREOVER COEXPRESSION OF GABA-B-R1 AND GABA-B-R2 APPEARS TO BE A PREREQUISITE FOR MATURATION AND TRANSPORT OF GABA-B-R1 TO THE
- PLASMA MEMBRANE. TISSUE SPECIFICITY: EXPRESSED IN BRAIN CORTEX, HIPPOCAMPUS, MEDIAL HABENULA, THALAMUS AND CEREBELLUM. COEXPRESSION IS SEEN IN
  - CEREBELLUM
- -i. DEVELOPMENTAL STAGE: ABUNDANT IN BRAIN CORTEX AND CEREBELLUM THROUGHOUT TOSTUNAL DEVELOPMENT WHEREAS ITS EXPRESSION IN SPINAL CORD GRADUALLY DECREASES:
  -i. DOMAIN: ALPHA-HELICAL PARTS OF THE C-TERMINAL INTRACELLULAR REGION MEDIATE HERERODIMERIC INTERACTION WITH GABA-B RECEPTOR 1.
  -i. SIMILARITY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPLED RECEPTORS.
  GABA-B RECEPTOR SUBFAMILY.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 The present amino acid sequence is the human GABA (gamma amino butyric acid) B-R2 receptor protein isolated from human hippocampus CDNA library. The coding region of GABA-B-R2 is cloned into the expression vector pEXJ.RHT3T7 and the plasmid is designated as TL-26 (AACC NO. 203515). GABA-B is a major inhibitory neurotransmitter, the receptors of which are widely distributed throughout the central nervous system. GABA-B-R2 receptor has anticonvulsant, antiasthmatic, uropathic, analgesic, antitussive, antiaddictive, nootropic and neuroprotective activity. GABA-B-R2 receptor agonists may used to treat spasticity, asthma, incontinence, drug addiction, Alzheimer's disease, decrease nociception and as an antitussive agent. Transgenic animals with altered GABA-B-R2 levels may be used to determine the physiological effects of varying levels of GABA-B-R2 receptor activity.

19;
This sequence is the human gamma amino butyric acid, class B, receptor 2 (GABABR2) polypeptide of the invention. The DNA can be used for the production of GABABR2, and for the design of probes that are useful for detection of the DNA or homologues in a sample. Antibodies against GABABR2 are useful for detecting GABABR2 and GABABR1/R2 on the surface of cells. Transgenic mice expressing GABABR1/R2 are useful for determining the physiological effects of varying levels of the receptors in the presence of an inducible promoter which regulates the receptors expression. These transgenic mice can also be used to identify GABABRI/R2 antagonists or agonists that are capable of alleviating abnormalities associated with the receptors. Recombinant cells expressing GABABRI/R2, or membrane extracts from these cells, are useful for identifying chemical compounds that specifically bind to the receptor. The cells can also be used to determine whether the chemical compounds are antagonists.
 agonists, activators or inhibitors. Agonists of GABABRI/R2 are useful for treating spatiality, asthma, incontinence and decreasing nociception. The agonists can also be used as anti-tussive agents. Agonists are also useful for treating drug addiction. Antagonists are used to treat Alzheimer's disease. Functional assays were not possible with GABABRI alone, so identification of a new GABABRZ polypeptide is useful for high throughput screening assays for agonists or antagonists against GABAB receptors using co-expression of GABABRI/R2. The pharmacological and signal transduction properties of the two receptors GABABRI and R2 match those of native GABAB receptors in the brain.

The present sequence is a protein related to human gb2 GABA B receptor. Human gb2 (Hgb2) shares sequence homology with rat GABA B receptor rgb1, parathyroid cell calcium-sensing receptor and metabotropic glutamate receptors. It can be produced in host cells by transforming them with recombinant expression vector comprising hgb2 encoding cDNA. The cells that express the receptor are used in the development of drugs for treatment of neurological and psychiatric disorders, for pharmacological, physiological, functional, or other investigational analysis of gb2 GABA B receptor, its agonists or antagonists and for determining the ability of a chemical to bind to a mammalian gb2 GABA B receptor in vitro. They may also be used for the preparation of antibodies to hgb2 which can be used in diagnostic assays.
 New GABAB (c-aminobutyric acid or 4-aminobutanoic acid) receptor, useful for identification of (ant)agonists and for treatment of neurological disorders

The invention relates to G-protein fusion receptors (1) comprising:

(1) in the N to C direction, extracellular (ECD), transmembrane (TMD) and intracellular (ICD) domains, each chosen independently from a CaR colcium receptor), GluR (metabotropic glutamate receptor) and GABABR (gamma-aminobutyric acid receptor); (2) an optional linker attached to the C-terminus of ICD; and (3) a G-protein (GP) linker to ICD or the Clinker. (1), and recombinant chimeric receptors (CR) without the GP component, are used to assess function of the various domains and to identify compounds (e.g. allosteric modulators or antagonists) that act on these domains. The modulators are potentially useful for treating or spinal cord injury, epilepsy, ischaemia, hypoglycaemia, anoxia, Alzheimer's disease, hyperparathyroidism, osteoporosis, cognitive disorders and depression. Nucleic acid (II) that encodes (I) is used: (1) for recombinant production of corresponding proteins; and (2) to produce cells used in screening for modulators. Use of CaR and mclur form mare its the natural domains truncture commared with his each of the production of corresponding proteins; and (2) to form mare its the natural domain etructure commared with his each of the production of corresponding proteins.

 The present sequence is a protein related to human gb2 GABA B receptor. Human gb2 (Hgb2) shares sequence homology with rat GABA B receptor rgb1, parathyroid cell calcium-sensing receptor and metabotropic glutamate receptors. It can be produced in host cells by transforming them with recombinant expression vector comprising hgb2 encoding cDNA. The cells that express the receptor are used in the development of drugs for treatment of neurological and psychiatric disorders, for pharmacological, physiological, functional, or other investigational analysis of gb2 GABA B receptor, its agonists or antagonists and for determining the ability of a chemical to bind to a mammalian gb2 GABA B receptor in vitro. They may also be used for the preparation of antibodies to hgb2 which can be used in diagnostic assays.

The present sequence represents a human gamma-amino-butyric acid (GABA)-B receptor, designated GABA-B2. The protein is a transmenbrane G-protein coupled receptor which is activated by the neurotransmitter GABA. Brain tissue has the highest expression of human GABA-B2 mRNA, especially in the cerebellum, cerebral cortex, occipital pole, frontal lobe, and temporal lobe. The GABA-B2 coated on chromosome 9, in the region 9421. Antagonists and agonists of the GABA-B2 protein are potential therapeutic agents. A GABA-B2 polynucleotide that is a dominant negative mutant can be used to reduce or eliminate expression of endogenous GABA-B2 protein, while antisense sequences and ribozymes are used to prevent translation of GABA-B2.
 New nucleic acid used to produce recombinant protein for screening for specific agonists and antagonists, potential therapeutics \,

 substance binds to gamma-amino-butyric acid (GABA)-B receptors and is potential agonist or antagonist of the GABA-B receptor. The method comprises exposing cells to 1-(aminomethyl)cyclohexaneacetic acid (gabapentin) in the presence or absence of the substance under investigation. The present sequence is human HG20, which was used in present invention to construct a functional GABA-B receptor, for use the method of the present invention.

GABA-B receptor subtypes useful for identifying modulators of GABA-B receptor activity that may be used for preventing and treating diseases including Alzheimer's disease, epilepsy and spasticity -
 SM;
 The present sequence is that of a novel human GABAB receptor subtype, GABAB-R2, as deduced from a cDNA clone (see AA294168) isolated from human cerebellum cDNA on the basis of homology to rat GABAA-R1a and 1b splice variants. GABAB receptors are members of the 7-transmembrane G-protein coupled receptor superfamily. Activation results in signal transduction through a variety of pathways mediated principally via members of the G1/Go family of pertussis toxin-sensitive G-proteins. GABAB-R2 is specifically expressed at high levels only in the central nervous system (CNS). The invention relates to novel GABAB subtypes GABAB-R1c and

 central nervous system; anticonvulsant; antiasthmatic; antiaddictive; uropathic; analgesic; antitussive, agonist; neuroprotective; nocorropic; treatment; spasticity; incontinence; asthma; drug addiction; nociception; Alzheimer's disease; transgenic animal.
 Gamma amino butyric acid; GABA-B-R2; human; inhibitory neurotransmitter;
 The present amino acid sequence is the version-1 of human GABA (gamma amino butyric acid)-B-R2 receptor protein, isolated from human hippocampus cDNA library. GABA-B is a major inhibitory neurotransmitter, the receptors of which are widely distributed throughout the central nervous system. GABA-B-R2 receptor has anticonvulsant, antiasthmatic, uropathic, analgesic, antitussive, antiaddictive, nootropic and neuroprotective activity, GABA-B-R2 receptor agonists may used to treat spasticity, asthma, incontinence, drug addiction, Alzheimer's disease, decrease nociception and as an antitussive agent. Transgenic animals
 with altered GABA-B-R2 levels may be used to determine the physiological
 Gaps
 effects of varying levels of GABA-B-R2 receptor activity.

Note: This sequence is an alternative version of the human GABA-B-R2 receptor protein sequence given in Fig. 5 (AAY70326).

This invention describes a novel protein heteromer, containing at least a GABA-B receptor protein and at least a protein (A) or its derivative a GABA-B receptor protein and at least a protein heteromer. The which retains the biological activity of the protein heteromer. The protein of the invention has neuroprotective activity and can be used for gene therapy. (A) or the protein heteromer are useful for identifying proteins (or nucleic acids encoding such proteins) that show specific binding affinity to (A) or the protein heteromer. The two-hybrid system or biochemical methods can be used to identify interaction domains of metabotropic receptors and use for pharmacotherapeutic intervention. Structural information from the protein or protein complex is useful for identifying and manufacture of substances which have specific monoconformation of these are useful as antigens to generate specific monocor or polyclonal antibodies. The encoding nucleic acid (I) is useful for identifying and isolating homologous sequences, as a marker for human disease and for gene therapy. The methods can be used to identify substances, which bind to (A) or (I) and that cause inhibition or activation of functional effects of the GABAPRayic signal messages in neurons of the central nervous system. The method can also identify substances that inhibit or amplify interactions of (A) with the protein cereptors or interactions of (A) with G-proteins or other signal cransduction molecules. The analysis of the interactions of (A) and GABA-B receptors is important for identifying potential active substances against diseases such as epilepsy, stroke and psychological diseases such as stress, manic depression, schizophrenia, migraine and others. This GABA-B receptor; neuroprotectant, gene therapy; central nervous system; metabotropic receptor; signal transduction; epilepsy; stroke; migraine; psychological disease; stress; manic depression; schizophrenia; human. A novel metabotropic receptor complex from the central nervous system, related coding sequences and methods of identifying binding substances, ligands and interactions with other proteins 866 wnttepsrtckdpiedinspehigrrlslglpil--------hhaylpsig 908 869 ННЅНАРАРТММОРІОО-ОLQQHLQOHQQMQQQHLQQQQQQQQQQQQQQQQQHHHRHLEKRN Hirschfeld K; Kuner R, Ā Claim 1; Page 26-29; 32pp; German. 21; The present sequence represents a human gamma-amino-butyric acid (GABA) B receptor (GABARR) subunit designated MG20. The present invention also describes the GABABR subunit designated GABABRIa. Cells expressing the new receptor subunits are useful for identifying GABABR agonists and antagonists. HG20 proteins and their antagonists are useful for inhibiting HG20 or GABABR function, useful for treating depression, epilepsy, neuropsychiatric disorders, dementias, muscular contractions, and central nervous system disorders. a GABA-B receptor protein and at least a protein (A) or a sequence which has a substitution, inversion, insertion or deletion of one or more amino acid residues and which retains the biological activity of the protein heteromer and which has neuroprotective activity. The encoding nucleic acid (I), the construct, (A) or the protein heteromer are useful for identifying proteins (or nucleic acids encoding such proteins) that show specific binding affinity to (A) or the protein heteromer. The two-hybrid system or biochemical methods can be used to identify interaction domains of metabotropic receptors and use for pharmacotherapeutic intervention. Structural information from the protein or protein complex is useful for identifying and manufacture of substances which have specific binding activity to the protein or protein complex. The protein heteromer and (A), or fragments of these are useful as antigens to generate specific mono- or polyclonal antibodies. (1) is useful for identifying and isolating homologous sequences, as a marker for human disease and for gene therapy. The methods can be used to identify substances, which bind to (A) or (I) and that cause inhibition or activation of functional effects of the GABAergic signal messages in neurons of the central nervous system. The method can also identify substances that inhibit or amplify interactions of (A) with other metabotropic receptors or interactions of ligands with the protein heteromer or (A) or interactions invention describes a novel protein heteromer, containing at least Claim 5; Page 53-56; 66pp; German.  23;
 The present sequence is the human GABABR2 receptor protein. GABAB receptors are metabotropic receptors that modulate synaptic transmission in brain. GABABR2 is closely related to GABABR1 and GABABR1. GABABR2 polypeptides are produced using recombinant nucleic acid techniques. They are used to raise antibodies and to identify specific modulators of GABABR2. These modulators are useful for treating spasificity, motor control disorders etc. The antibodies are used as therapeutic modulators, for GABABR2 quantification, affinity purification and to study synthesis, structure and function of the receptor.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@ib-sib.ch).
 FÜNCTION: RÉCEPTOR FOR GLUTAMATÉ. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY A G-PROTEIN THAT ACTIVATES A PHOSPHATIDYLINOSITOL-
 CALCIUM SECOND MESSENGER SYSTEM. MAY PARTICIPATE IN THE CENTRAL ACTION OF GLUTAMATE IN THE CRY, SUCH AS LOWG-TERM POTENTIATION IN THE HIPPOCAMPUS AND LONG-TERM DEPRESSION IN THE CEREBELLUM. SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. ARE PRODUCTS: 2 ISOPORMS; ALPHA (SHOWN HERE) AND BETA; ARE PRODUCED BY ALTERNATIVE SPLICING. SIMILARIY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPLED RECEPTORS.

Neuropharmacology 34:149-155(1995).
-I-EUNCTION: RECEPTOR FOR GLUTAMATE. THE ACTIVITY OF THIS RECEPTOR
IS MEDIATED BY A G-PROTEIN THAT INHIBITS ADENYLATE CYCLASE
 -!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
-!- TISSUE SPECIFICITY: STRONGLY EXPRESSED IN THE CEREBELLUM.
EXPRESSED AT LOW LEYELS IN HIPPOCAMPUS, HYPOTHALAMUS AND
THALAMUS. NO EXPRESSION DETECTED IN LIVER.
-!- SIMILARITY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPLED RECEPTORS.
STRONGEST, TO MGLURG.

798 IPIFFGTAQSAEKMYIQTTTLTVSMSLSASVSLGMLYMPKVYIIIFHPEQNVQKRKRSFK 857
 "Cloning and functional expression of alternative spliced variants of
 Malherbe P., Kratzeisen C., Lundstrom K., Richards J.G., Faull R.L.M.
 the human metabotropic glutamate receptor 8.", submitted (FEB-1995) to the EMBL/Gebank/DBBJ databases.
-!- FUNCTION: RECEPTOR FOR GLUTAMARE. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY A G-PROTEIN THAT INHIBITS ADENYLATE CYCLASE
 -!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
-!- ALTERNATIVE PRODUCTS: 3 ISOFORMS; A (SHOWN HERE), B AND C; ARE PRODUCED BY ALTERNATIVE SPLICING.
-!- SIMILARITY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPLED RECEPTORS.
 Scherer S.W., Soder S., Duvoisin R.M., Huizenga J.J., Tsui L.-C.; The human metabotropic glutamate receptor 8 (GRM8) gene: a disproportionately large gene located at 7q31.3-q32.1."; Genomics 44:232-236(1997).
 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

RY Coexpression of full-length gamma-aminobutyric Acid(B) (GABA(B))
RT receptor 4 supports the GABA(B) heterodimer as the functional
RT receptor.;
I receptor.;
J. Pharmacol. Exp. Ther. 293:460-467(2000)
C. FUNCTION: RECEPTOR FOR GABA. THE ACTIVITY OF THIS RECEPTOR IS
MEDIATED BY G-PROTEINS THAT INHIBITS ADENVIX. CYCLASE ACTIVITY,
STIMULATES PHOSPHOLIPASE A2, ACTIVATES POTASSIUM CHANNELS,
INCATIVATES VOLTAGE-DEPRENDENT CALCIUM-CHANNELS. AND MODILATES
INCATIVATES VOLTAGE-DEPRENDENT CALCIUM-CHANNELS. AND MODILATES
INCATIVATES VOLTAGE-DEPRENDENT CALCIUM CHANNELS. AND MODILATES
INCATIVATES VOLTAGE-DEPRENDENT CALCIUM CHANNELS. WHEREAS POSTSYNAPTIC
GABA-B-R INHIBITORY SYNAPTIC TRANSMISSION. PRE-SYNAPTIC
GABA-B-R DECREASE NEURONAL EXCITABILITY BY ACTIVATING A PROMINENT
INMARDIX RECTIFYING POTASSIUM (KIR) CONDUCTANCE THAT UNDERLIES THE
LATE INHIBITORY POSTSYNAPTIC POPTASILY (KIR) CONDUCTANCE THAT UNDERLIES THE
LATE INHIBITORY SCON WAVE SLEEP, MUSCLE RELAXATION AND
ANTINOCICEPTION.
-i-SUBMUTT. HERPRONDENT.
 Я,
 SUBUNIT: HETERODIMER OF GABA-B-R1 AND GABA-B-R2. NEITHER OF WHICH IS EFFECTIVE ON ITS OWN AND HOMODIMERIC ASSEMBLY DOES NOT SEEM TO

ALTERNATIVE PRODUCTS: 3 ISOFORMS; 2A (SHOWN HERE), 2B AND 2C; ARE. PRODUCED BY ALTERNATIVE SPLICING.
PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: HIGHLY EXPRESSED IN BRAIN, ESPECIALLY IN
CEREBRAL CORTEX, THALAMUS, HPPOCAMPUS, FRONTAL, OCCIPITAL AND
TEMPORAL LOBE, OCCIPITAL POLE AND CEREBELLUM, FOLLOWED BY CORPUS
CALLOSUM, CAUDATE NUCLEUS, SPINAL CORD, AMYGDALA AND MEDULLA.
WEAKLY EXPRESSED IN HEART, TESTIS AND SKELETAL MUSCLE.
DOMAIN: ALPHA-HELICAL PARTS OF THE C-TERMINAL INTRACELLULAR REGION
MEDIATE HETERODIMERIC INPERACTION WITH GABA-B RECEPTOR 1.
SIMILARITY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPLED RECEPTORS.

SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. MOREOVER COEXPRESSION OF CABA-B-R1 AND GABA-B-R2 APPEARS TO BE A PREREQUISITE FOR MATURATION AND TRANSPORT OF GABA-B-R1 TO THE

PLASMA MEMBRANE
